2. I am at present developing the Kudos model to have a higher gear ratio. It will be a new gear train set at an 8 to 1 ratio. This will be an option and the old 5 to 1 ratio will still be the standard. This will be in my view make the Kudos the best bench press when fitted with its other options such as stainless steel rollers and the steel rim wheel. Producing intaglio work will be rendered effortless.

I have read recently that geared presses damages plates, well that's foolish talk by people who don't fit gears to their presses. This lends to think either they are too lazy or don't have the design capabilities. Image a bicycle without gears, ok in East Lincs but not in The Pennines. Rollaco never rests on its laurels always innovating.
